

1. DA and PA Comparison

I selected Instagram and Zomato.

Website	Domain Authority (DA)	Page Authority (PA)
Instagram.com	98	67
Zomato.com	82	58

The available Moz data reports Instagram at DA 98 / PA 67, while an older Zomato measurement reports DA 82 / PA 58. ([HypeStat](#))

Difference between DA and PA:

- DA (Domain Authority) measures the overall ranking strength of an entire domain.
- PA (Page Authority) measures the ranking strength of a particular page, such as the homepage. Therefore, DA is domain-level while PA is page-level.

Conclusion: Instagram has higher DA and PA in these measurements, indicating a stronger overall backlink profile and stronger homepage authority.

2. Three Backlinks Pointing to Flipkart.com

Using backlink-checking data, backlinks can be classified as DoFollow or NoFollow. Ahrefs specifically provides filters for these link types. ([Ahrefs](#))

Linking Website/Page	Link Type	Example/Observation
CrazyEngineers.com	NoFollow	Product links to Flipkart are marked rel="nofollow". (Crazy Engineers)
CrazyEngineers.com – Moto G discussion	NoFollow	Flipkart product links in the discussion contain the NoFollow attribute. (Crazy Engineers)
Other Flipkart referring domains	DoFollow / NoFollow	Ahrefs' backlink database reports both types and allows filtering by link type. (Ahrefs)

Why is a DoFollow backlink more valuable?

A quality DoFollow backlink can pass link equity/authority signals to the linked website, whereas a NoFollow link is specifically marked so search engines do not treat it as a normal quality vote. ([Ahrefs Help Center](#))

Note: Ahrefs' free checker shows only a limited sample of backlinks, so the exact three links visible can change as its index updates.

3. Trust Flow, Citation Flow and Domain Rating

For this example, I selected BookMyShow.com.

Metric	Tool	Value*	What it indicates
Trust Flow (TF)	Majestic	Check live	Measures the quality/trustworthiness of links pointing to the website.
Citation Flow (CF)	Majestic	Check live	Measures the quantity/influence of links pointing to the website.
Domain Rating (DR)	Ahrefs	Check live	Measures the strength of a website's backlink profile, particularly its followed referring domains.

*The free versions of these tools can display changing/live values depending on their current index, so I recommend entering bookmyshow.com directly into the respective tools when submitting the assignment.

In simple terms, Trust Flow focuses on link quality, Citation Flow focuses more on link quantity/influence, and Ahrefs DR measures overall referring-domain strength. ([SEO.Domains](#))

4. Three Off-Page SEO Activities for a New Music Playlist App

1. Guest Posting on Music Blogs

I would write useful articles such as "Best Indian Music Playlists for Every Mood" and target popular music blogs, entertainment websites and music magazines for relevant backlinks.

2. YouTube Collaborations

I would contact music YouTubers, playlist creators and music-review channels and provide them with useful playlist resources. They could mention and link to the app website in their video description.

3. Digital PR and Tech Articles

I would pitch the new app to technology websites, startup blogs and app-review websites. A story about the app's unique features could generate authoritative editorial backlinks.

Goal: Focus on relevant, trustworthy websites rather than simply collecting a large number of low-quality backlinks.

5. Five Creative Ways to Earn DoFollow Backlinks

Here are five AI-generated suggestions:

1. **Create a "Best Food in My City" Guide**
Create detailed city food guides and contact food bloggers and local websites to reference and link to the guide.
2. **Partner With Food Bloggers**
Give food bloggers access to special offers or app features and ask them to review the app and include a link to the website.
3. **Create Free Food-Related Tools**
Build useful tools such as a "What Should I Eat Today?" generator, calorie calculator or restaurant budget calculator that food websites can naturally reference.
4. **Publish Original Food Surveys and Data**
Conduct surveys such as "Most Popular Foods Ordered Online in India" and publish the results. News websites and food blogs may link to the original research.
5. **Create a Local Restaurant Awards/Guide Page**
Publish annual lists such as "Top 50 Restaurants in Ahmedabad" and contact the featured restaurants and local publications to encourage them to mention and link to the page.

My Favorite: Original Food Research

I would choose original food surveys and data because they can attract backlinks naturally. For example, if a startup publishes a study showing "India's Most Ordered Foods in 2026," food blogs, newspapers, business websites and social-media creators can reference the statistics and link back to the original research.

This strategy can build relevant backlinks, brand awareness and referral traffic at the same time, rather than relying only on asking websites for links.
