

1. List 3 reasons why SEO is important for any online business in India, and give a real-world example for each reason using brands like Myntra or CarDekho.

Answer:

1. SEO increases organic traffic

- SEO helps a website appear higher on Google when customers search for relevant products or services.
- This can bring visitors without paying for every click through advertising.
- **Example – Myntra:** If someone searches for “men’s running shoes online” or “best formal shirts for men,” strong SEO can help Myntra's relevant pages appear in search results and attract potential customers.

2. SEO builds brand visibility and trust

- Websites that consistently appear near the top of Google results can become more recognizable and trustworthy to users.
- **Example – CarDekho:** When a customer searches for “best cars under ₹10 lakh in India,” CarDekho can use SEO-optimized comparison and informational pages to appear in the results and introduce the brand to potential car buyers.

3. SEO can generate long-term business growth

- Unlike paid advertisements, an SEO-optimized page can continue attracting organic visitors after the initial optimization work.
- **Example – Myntra:** Product-category pages and fashion guides optimized around searches such as “best ethnic wear for women” can continue attracting users who are actively looking to purchase.

2. Research the current average salary for an SEO Specialist in India using job portals like Naukri.com or LinkedIn, and write a short paragraph comparing the

salary range to another digital marketing role of your choice.

Answer:

According to a recent **Naukri.com** article, the salary range listed for an **SEO Specialist in India is approximately ₹2–9 lakh per annum (LPA)**, while the range for a **Digital Marketing Manager is approximately ₹8–20 LPA**. Naukri also reports an SEO Specialist salary estimate of **₹5–10 LPA** in its 2026 high-paying-skills article. Actual salary varies considerably based on experience, location, company, technical skills and responsibilities. ([Naukri](#))

Comparison: SEO Specialist roles generally have a lower salary range than Digital Marketing Manager positions because a Digital Marketing Manager usually handles a wider range of responsibilities, such as SEO, paid advertising, social media, analytics, campaign planning and team management. However, an SEO Specialist with strong technical SEO, analytics and strategic skills can progress into senior SEO and digital marketing management roles.

3. Pick any one app you use daily, such as Myntra, Zomato, or CarDekho, and analyze how SEO might help them attract more users. Write 3 specific SEO strategies they could use to improve their Google search ranking.

Answer: Myntra

SEO can help **Myntra** attract users who are already searching Google for fashion products, brands, styles and shopping-related information. Instead of depending completely on paid advertisements, Myntra can use SEO to bring potential customers to its product, category and informational pages.

Three specific SEO strategies:

1. Keyword research and category-page optimization

- Myntra can target high-intent keywords such as:
 - “women’s ethnic wear”
 - “men’s running shoes”
 - “best jeans for men”
 - “women’s party dresses”

- These keywords can be naturally included in page titles, headings, descriptions and useful content.

2. Create useful fashion content

- Myntra could publish SEO-friendly guides such as:
 - “Best Office Wear for Women”
 - “How to Choose Running Shoes”
 - “Latest Wedding Outfit Ideas”
- These pages can attract informational searches and internally link users to relevant products.

3. Improve technical SEO and internal linking

- Myntra can improve page speed, mobile usability, structured data, crawlability and internal links.
- For example, a fashion article about “Wedding Outfit Ideas” could link directly to relevant men's and women's clothing categories.
- This helps both users and search engines discover related pages more efficiently.

4. Create a comparison table with at least 4 points showing the pros and cons of working as an SEO freelancer, joining an agency, or taking a full-time SEO job.

Answer:

Point	SEO Freelancer	SEO Agency	Full-Time SEO Job
Income	Can potentially earn more with multiple clients, but income can fluctuate.	Usually receives a fixed salary; growth depends on the agency.	Stable monthly salary with predictable income.
Work Variety	Can work with different industries and clients.	Usually works on multiple clients and projects.	Usually focuses deeply on one company's website/brand.

Learning	Requires self-learning and independent problem-solving.	Fast learning because of exposure to different clients and SEO problems.	Can develop deep knowledge of one industry and business.
Job Security	Lower; depends on finding and retaining clients.	Moderate; depends on agency performance and employment.	Generally higher because of stable employment.
Flexibility	Pro: High flexibility in working hours and location.	Con: Usually follows agency schedules and deadlines.	Con: Usually follows fixed company working hours.
Responsibility	Con: Must handle clients, sales, reporting and SEO yourself.	Con: Can involve multiple deadlines and demanding clients.	Pro: Usually has defined responsibilities and a team structure.

Overall conclusion:

- **Freelancing** is best for people who want flexibility and are comfortable finding clients.
- **Agency work** is excellent for gaining experience quickly and working on different projects.
- **Full-time SEO** is suitable for people who prefer stability, structured career growth and specialization.

5. Find a real job posting for an SEO role on any job portal and list the top 5 skills or tools mentioned in the requirements section.

Answer:

A current example is the **SEO Specialist – Ahmedabad** job posting from **Media Clock**, listed on LinkedIn. The posting asks for experience with SEO strategy, keyword research, on-page optimization, technical SEO, link building and SEO analytics tools. ([LinkedIn](#))

Top 5 skills/tools mentioned:

No.	Skill / Tool	Why it is important
1	Keyword Research	Helps identify search terms that potential customers use on Google.

- | | | |
|----------|---|---|
| 2 | On-Page SEO | Helps optimize titles, headings, URLs, content and internal links. |
| 3 | Technical SEO | Helps identify problems such as crawl errors, broken links and duplicate content. |
| 4 | Google Analytics & Google Search Console | Used to monitor website traffic, organic performance, rankings and SEO results. |
| 5 | SEMrush / Moz | SEO tools used for research, analysis, competitor research and optimization. |
