

1. Pick any app you use daily (like Zomato, Instagram, or Paytm) and outline a simple marketing objective for that app, such as increasing user sign-ups or boosting in-app purchases.

Answer: Zomato

Marketing Objective:

The main marketing objective of Zomato would be to **increase new user sign-ups and encourage first-time food orders.**

Zomato can achieve this objective by using social media advertisements, influencer marketing, referral programs, and attractive first-order discounts. The goal would be to increase app downloads, registrations, and the number of first-time customers.

2. Create a one-page marketing plan for a new feature in a popular app (for example, a 'Dark Mode' in Myntra or a 'Group Order' feature in Swiggy). Include target audience, key message, channels you would use (social media, email, etc.), and a basic timeline.

Answer: Marketing Plan for Swiggy's New "Group Order" Feature

Feature: Group Order – Allows friends, family members, or colleagues to add their food choices to one common order.

Target Audience

The target audience would be **college students, young professionals, families, and groups of friends** who frequently order food together.

Key Message

“Order Together, Enjoy Together!”

The feature makes group food ordering easier, faster, and more convenient.

Marketing Channels

1. **Instagram & Facebook:** Create Reels, Stories, memes, and posts demonstrating how Group Order works.
2. **YouTube:** Use short videos and influencer demonstrations to explain the feature.
3. **Influencer Marketing:** Collaborate with food bloggers and lifestyle influencers.
4. **Email Marketing:** Send emails to existing users introducing the new feature and offering a first-use discount.
5. **Push Notifications:** Send messages such as “**Planning dinner with friends? Try Group Order today!**”
6. **Referral Marketing:** Give users rewards or discounts when they invite friends to join a group order.

Basic Timeline

Week	Marketing Activity
-------------	---------------------------

Week 1	Create teaser posts and announce the upcoming feature.
---------------	--

Week 2	Officially launch Group Order through social media and the app.
---------------	---

Week 3	Run influencer promotions and first-use discount campaigns.
---------------	---

Week 4	Measure results and improve the campaign based on user feedback.
---------------	--

Main Objective

To increase awareness and usage of the Group Order feature and encourage customers to place more orders with their friends and family.

3. List 5 possible digital marketing channels you would use to promote a new music playlist feature in a Spotify-style app, and write one line about why each channel fits the target audience.

Answer:

Digital Marketing Channel	Why It Fits the Target Audience
1. Instagram	Young music listeners actively use Instagram, so Reels and Stories can create excitement about the new playlist feature.
2. YouTube	Music lovers use YouTube for discovering songs, making video advertisements and creator promotions effective.
3. Influencer Marketing	Musicians, DJs, and music influencers can demonstrate the feature and encourage their followers to try it.
4. Email Marketing	Personalized emails can recommend playlists based on users' interests and encourage them to explore the new feature.
5. Push Notifications	Notifications can immediately inform existing users about the new feature and encourage them to create or listen to playlists.

4. Imagine you are launching a 'Refer & Earn' campaign for a cricket streaming app during IPL season. Write down 3 measurable KPIs (Key Performance Indicators) you would track to judge the campaign's success.

Answer:

For a “Refer & Earn” campaign during IPL season, I would track the following three KPIs:

1. Number of New Users

Measure how many new users register on the cricket streaming app through referrals. A higher number means the campaign is successfully attracting new customers.

2. Referral Code Usage

Track how many times users successfully use referral codes. This shows how actively existing customers are inviting their friends and family.

3. App Downloads Through Referrals

Measure the number of app downloads generated through referral links or codes. This helps determine the direct impact of the campaign on app growth.

Conclusion

The campaign would be considered successful if it generates **more app downloads, higher referral-code usage, and a significant increase in new users** during the IPL season.
