

Below are **ready-to-use answers** for all 5 questions. You can copy the JSON-LD directly into the `<head>` or HTML of the respective page.

1. FAQ Schema — Zomato-style Restaurant Page

Answer: Add FAQ schema using JSON-LD with questions such as home delivery and opening hours.

```
<script type="application/ld+json">
{
  "@context": "https://schema.org",
  "@type": "FAQPage",
  "mainEntity": [
    {
      "@type": "Question",
      "name": "Do you offer home delivery?",
      "acceptedAnswer": {
        "@type": "Answer",
        "text": "Yes, we offer home delivery within selected areas. Delivery times may vary depending on your location."
      }
    },
    {
      "@type": "Question",
      "name": "What are your opening hours?",
      "acceptedAnswer": {
        "@type": "Answer",
        "text": "We are open every day from 11:00 AM to 11:00 PM."
      }
    },
    {
      "@type": "Question",
      "name": "Do you accept online orders?",
      "acceptedAnswer": {
        "@type": "Answer",
        "text": "Yes, customers can place orders online during our operating hours."
      }
    }
  ]
}
</script>
```

Validation: Paste the page URL or code into Google's **Rich Results Test** and check whether the FAQ structured data is detected and valid.

2. HowTo Schema — How to Book IPL Tickets on BookMyShow

Answer: Use **HowTo** schema with at least 3 steps describing the ticket-booking process.

```
<script type="application/ld+json">
{
  "@context": "https://schema.org",
  "@type": "HowTo",
  "name": "How to Book IPL Tickets on BookMyShow",
  "description": "A simple guide to booking IPL match tickets online through BookMyShow.",
  "step": [
    {
      "@type": "HowToStep",
      "name": "Open BookMyShow",
      "text": "Visit the BookMyShow website or open the BookMyShow app and select the sports
or IPL section."
    },
    {
      "@type": "HowToStep",
      "name": "Select the IPL Match",
      "text": "Choose the IPL match you want to attend, select the venue and preferred date."
    },
    {
      "@type": "HowToStep",
      "name": "Choose Tickets",
      "text": "Select your preferred seating category and the number of tickets you want to
purchase."
    },
    {
      "@type": "HowToStep",
      "name": "Make Payment",
      "text": "Review your booking details and complete the payment using an available payment
method."
    }
  ]
}
</script>
```

This markup tells search engines that the page contains a **step-by-step guide**.

3. Product Schema — Flipkart-style Smartphone Product

Answer: Product schema can include the product name, brand, image, and price.

```
<script type="application/ld+json">
{
  "@context": "https://schema.org",
  "@type": "Product",
  "name": "Samsung Galaxy A55 5G",
  "image": [
    "https://example.com/images/samsung-galaxy-a55.jpg"
  ],
  "description": "Samsung Galaxy A55 5G smartphone with a high-quality display and advanced camera features.",
  "brand": {
    "@type": "Brand",
    "name": "Samsung"
  },
  "offers": {
    "@type": "Offer",
    "priceCurrency": "INR",
    "price": "39999",
    "availability": "https://schema.org/InStock",
    "url": "https://example.com/samsung-galaxy-a55"
  }
}
</script>
```

Important: Replace the example image and product URL with the **actual product URLs** from your website.

4. Review + AggregateRating — Myntra-style Sneaker Page

Answer: Add **aggregateRating** for the overall rating and **review** for an individual customer review.

```

<script type="application/ld+json">
{
  "@context": "https://schema.org",
  "@type": "Product",
  "name": "Nike Air Max Running Shoes",
  "image": [
    "https://example.com/images/nike-air-max.jpg"
  ],
  "brand": {
    "@type": "Brand",
    "name": "Nike"
  },
  "aggregateRating": {
    "@type": "AggregateRating",
    "ratingValue": "4.3",
    "bestRating": "5",
    "worstRating": "1",
    "reviewCount": "120"
  },
  "review": {
    "@type": "Review",
    "author": {
      "@type": "Person",
      "name": "Rahul"
    },
    "datePublished": "2026-08-15",
    "reviewBody": "The sneakers are comfortable, stylish and fit well. Good quality for everyday use.",
    "reviewRating": {
      "@type": "Rating",
      "ratingValue": "4.5",
      "bestRating": "5",
      "worstRating": "1"
    }
  }
}
</script>

```

Here, the page displays an **aggregate rating of 4.3/5 from 120 reviews**, plus one sample review.

5. Product + Offer + Price + Availability — Swiggy-style Food Item

Answer: Extend the Product schema with an **Offer** containing price, currency, availability and a special deal.

```
<script type="application/ld+json">
{
  "@context": "https://schema.org",
  "@type": "Product",
  "name": "Veg Cheese Burger",
  "image": [
    "https://example.com/images/veg-cheese-burger.jpg"
  ],
  "description": "A delicious vegetarian cheese burger with fresh vegetables and cheese.",
  "brand": {
    "@type": "Brand",
    "name": "Example Restaurant"
  },
  "offers": {
    "@type": "Offer",
    "url": "https://example.com/veg-cheese-burger",
    "priceCurrency": "INR",
    "price": "149",
    "availability": "https://schema.org/InStock",
    "itemCondition": "https://schema.org/NewCondition",
    "priceValidUntil": "2026-12-31"
  }
}
</script>
```

Short explanation

- **offers** → provides information about the item being sold.
- **price** → tells Google the current selling price.
- **priceCurrency** → specifies the currency, here INR.
- **availability** → tells whether the product is available.
- **priceValidUntil** → indicates how long the listed price is valid.

Final step for all schemas

After adding the JSON-LD to your HTML, test the page using Google's **Rich Results Test**. Also make sure the structured-data information matches what users can actually see on the webpage; don't use fake reviews, ratings, prices, or availability just to obtain rich results.
