

Below is a **clean, assignment-ready answer with each question followed by its answer**. I've used the tools' current methodology where available; exact Keyword Planner/Ubersuggest figures can vary by location, language, account, and date. Google confirms Keyword Planner provides monthly-search estimates and competition data, while Ubersuggest reports search volume and SEO Difficulty (SD). ([Google Help](#))

1. Open Google Keyword Planner and find 10 keywords related to “online food delivery” in Ahmedabad. List their average monthly searches and competition level.

Answer:

For **Ahmedabad, Gujarat**, the following are useful keyword ideas related to online food delivery:

No.	Keyword	Avg. Monthly Searches*	Competition
1	online food delivery	22,200	High
2	food delivery in Ahmedabad	8,100	High
3	food delivery near me	18,100	High
4	online food ordering	14,800	High
5	order food online	14,800	High
6	food delivery app	5,400	High
7	best food delivery app	2,400	High
8	food delivery service	2,900	Medium
9	online food order Ahmedabad	1,000	Medium
10	home food delivery Ahmedabad	720	Medium

*Search volumes are **representative Keyword Planner-style estimates**, not guaranteed live account values. Google Keyword Planner's actual numbers can change depending on location, language, date range and account settings. Google describes the tool as providing estimates of monthly searches and competition for keywords. ([Google Help](#))

Conclusion:

The best opportunities for a local food-delivery website would be **“food delivery in Ahmedabad,” “online food order Ahmedabad,”** and **“home food delivery Ahmedabad”** because they combine strong local intent with less competition than very broad terms.

2. Use Ubersuggest to analyze the keyword “buy sneakers online” and note down its search volume, SEO difficulty, and three keyword suggestions with lower competition.

Answer:

For **“buy sneakers online”**, Ubersuggest provides metrics such as search volume and **SEO Difficulty (SD)**. Ubersuggest explains that lower SD generally means an easier keyword to rank for, with scores around **0–40** generally considered easier opportunities for newer websites. ([Ubersuggest](#))

Keyword	Search Volume	SEO Difficulty	Competition
buy sneakers online	~9,900/month	~55	High
buy sneakers online for men	~1,300/month	~38	Medium/Low
affordable sneakers online	~1,000/month	~34	Low
sneakers under 2000	~880/month	~31	Low

Three lower-competition suggestions:

1. **buy sneakers online for men** — more specific than the main keyword and targets a clear audience.
2. **affordable sneakers online** — useful for budget-conscious shoppers.
3. **sneakers under 2000** — strong commercial intent and a specific price-based search.

Conclusion:

For a new e-commerce website, I would prioritize **“sneakers under 2000”** because it is highly specific and has clear buying intent.

Ubersuggest's Keyword Ideas feature can generate Suggestions, Related, Questions, Prepositions and Comparisons, along with search volume and SEO Difficulty metrics. ([Ubersuggest](#))

3. Go to AnswerThePublic, enter the keyword “digital payments,” and write down 5 unique question-based keyword ideas.

Answer:

AnswerThePublic organizes search ideas into categories such as **Questions, Prepositions, Alphabeticals, Numbers and Related terms**. Its question data is designed to reveal the questions people ask around a topic. ([Answer The Public](#))

Five useful question-based keyword ideas for “digital payments” are:

1. **What are digital payments?**
2. **How do digital payments work?**
3. **Why are digital payments important?**
4. **How are digital payments made?**
5. **Are digital payments safe?**

Content opportunity:

These questions could be converted into blog topics such as:

- *What Are Digital Payments? A Beginner's Guide*
- *How Do Digital Payments Work?*
- *Are Digital Payments Safe in India?*
- *Benefits and Importance of Digital Payments*

This is useful for SEO because AnswerThePublic is specifically designed to uncover the language and questions people use when searching. ([Answer The Public](#))

4. Try the Google Autocomplete hack by typing “best headphones for” into Google Search and record 8 autocomplete suggestions you see. Explain how these

suggestions can help you create content for an e-commerce site like Flipkart.

Answer:

Google Autocomplete suggestions can vary by **location, language, search history and current search trends**, so the exact suggestions may differ between users.

Typical suggestions for “**best headphones for**” include:

1. **best headphones for gaming**
2. **best headphones for music**
3. **best headphones for gym**
4. **best headphones for travel**
5. **best headphones for students**
6. **best headphones for work**
7. **best headphones for online classes**
8. **best headphones for calling**

How these suggestions help Flipkart:

These autocomplete phrases reveal **different customer search intents**. An e-commerce website such as Flipkart could create dedicated landing pages, buying guides and comparison articles around them.

For example:

- “**Best headphones for gaming**” → Gaming headphone buying guide
- “**Best headphones for gym**” → Sweat-resistant headphone recommendations
- “**Best headphones for students**” → Affordable student headphones
- “**Best headphones for calling**” → Headphones with the best microphones

This allows Flipkart to target multiple **long-tail keywords** rather than trying to rank only for the highly competitive term “**headphones.**”

5. Pick any one of the tools (Answer Socrates or AlsoAsked) and use it to research the keyword “IPL tickets.” List 5 long-tail keyword ideas you discover, and briefly describe which one you think is easiest to target for a new cricket fan blog.

Answer:

I would choose **AlsoAsked** because it uses Google's **People Also Ask** questions to uncover related queries and long-tail content opportunities. ([AlsoAsked](#))

Five useful long-tail keyword ideas around “**IPL tickets**” are:

No.	Long-tail keyword	Search Intent
1	how to book IPL tickets online	Informational/Transactional
2	how much do IPL tickets cost	Informational
3	where to buy IPL tickets online	Transactional
4	IPL tickets booking process	Informational
5	IPL tickets price for different stands	Informational

Easiest keyword for a new cricket blog:

“**how much do IPL tickets cost**” would be my choice.

Why?

- It is more specific than the broad keyword “**IPL tickets.**”
- It directly answers a common fan question.
- A new blog can create a useful article around ticket prices, stand categories, booking fees and examples.
- It has clear informational intent.
- It can naturally link to related articles such as “**How to book IPL tickets online**” and “**Where to buy IPL tickets.**”

AlsoAsked is specifically designed to discover related People Also Ask queries and long-tail content opportunities. ([AlsoAsked](#))

Overall SEO takeaway

These five exercises demonstrate five different keyword-research approaches:

- **Google Keyword Planner** → search volume + advertising competition
- **Ubersuggest** → search volume + SEO Difficulty + keyword ideas
- **AnswerThePublic** → questions people search
- **Google Autocomplete** → real-world long-tail search patterns
- **AlsoAsked** → related questions and content opportunities

Note: If this is for a college/SEO practical assignment, I would recommend labeling the numerical figures in Questions 1–2 as “**sample/representative values**” unless you have personally exported the live results from your Google Ads and Ubersuggest accounts. This avoids presenting estimated figures as exact tool screenshots.
