

1. Pick any app you use daily and list 5 short-tail keywords and 5 long-tail keywords

App chosen: Zomato

Short-tail keywords

1. Zomato
2. Food delivery
3. Restaurants
4. Online food
5. Food delivery app

Long-tail keywords

1. Best food delivery app in India
2. Order food online from Zomato
3. Best restaurants near me on Zomato
4. Zomato food delivery near me
5. Order dinner online from nearby restaurants

2. For the Flipkart shopping app, identify 5 possible LSI keywords related to "mobile phones"

1. Smartphone deals
2. Latest Android phones
3. Mobile phone offers
4. 5G smartphones
5. Best smartphones under ₹20,000

These related keywords can help Flipkart create content that covers different aspects of **mobile phones** and matches a wider range of relevant search queries.

3. Classify each search query by search intent

Search Query	Search Intent	Explanation
--------------	---------------	-------------

best budget laptops 2024	Commercial	The user is researching and comparing laptops before making a purchase.
buy iPhone 14 online	Transactional	The user has a clear intention to purchase an iPhone 14 online.
Spotify login	Navigational	The user wants to reach the Spotify login page.
how to use Paytm UPI	Informational	The user wants to learn how to use Paytm UPI.
Myntra vs Ajio	Commercial	The user is comparing two shopping platforms before deciding where to shop.

4. Food delivery scenario with intent modifiers

Scenario: Ordering pizza online

Search Query	Intent Modifier	What the user is looking for
best pizza near me	Best + Near me	The user wants to find highly rated pizza restaurants nearby.
pizza delivery near me	Near me	The user wants pizza that can be delivered to their current location.
Domino's vs Pizza Hut	Vs	The user wants to compare Domino's and Pizza Hut before choosing where to order.
