

Below is a **ready-to-submit answer** with each question followed by its answer. I've kept the language simple and suitable for an SEO/digital-marketing assignment.

1. Use ChatGPT to generate a list of 15 keyword ideas for a new food delivery app targeting college students in Ahmedabad.

Question:

Use ChatGPT to generate a list of 15 keyword ideas for a new food delivery app targeting college students in Ahmedabad.

Answer:

No.	Keyword Idea	Search Intent
1	food delivery in Ahmedabad	Transactional
2	food delivery for college students in Ahmedabad	Transactional
3	cheap food delivery Ahmedabad	Transactional
4	affordable food near college in Ahmedabad	Transactional
5	best food delivery app Ahmedabad	Commercial
6	late night food delivery Ahmedabad	Transactional
7	food delivery near Ahmedabad colleges	Transactional
8	student food deals Ahmedabad	Commercial
9	cheap meals for students Ahmedabad	Transactional
10	food under 100 in Ahmedabad	Transactional
11	best student meal delivery Ahmedabad	Commercial
12	pizza delivery near colleges Ahmedabad	Transactional
13	budget food delivery Ahmedabad	Transactional
14	online food ordering Ahmedabad students	Transactional

Best long-tail opportunities:

“food delivery for college students in Ahmedabad,” “food under 100 in Ahmedabad,” and “student discounts on food delivery Ahmedabad” are especially useful because they target a specific audience and need.

2. Write 2 different prompts for ChatGPT to get long-tail keyword suggestions for a cricket livestreaming website.

Question:

Write 2 different prompts for ChatGPT that would help you get long-tail keyword suggestions for a cricket livestreaming website. Compare the results and note which prompt gave you more relevant keywords.

Answer:

Prompt 1 – General

“Suggest long-tail SEO keywords for a cricket livestreaming website. Include keywords related to watching cricket matches online, live cricket scores, cricket streaming, and cricket matches.”

Example results:

- cricket live streaming
- watch cricket online
- live cricket match
- cricket streaming website
- live cricket scores
- online cricket match

Prompt 2 – Specific

“Generate 20 long-tail SEO keywords for a cricket livestreaming website targeting Indian cricket fans. Focus on users searching for live IPL matches, India cricket matches, free cricket streaming, live cricket scores, and mobile cricket streaming. Include location-specific, match-specific, and question-based keywords with clear search intent.”

Example results:

- watch IPL live online in India
- free IPL live streaming online
- India cricket match live streaming
- watch India vs Australia live online
- IPL live streaming on mobile
- how to watch IPL live online
- live cricket streaming for Indian users
- free live cricket match streaming
- watch cricket live on mobile

Comparison

Prompt 2 gave more relevant keywords because it clearly specified the target audience, country, content type, search intent, and important cricket topics. The general prompt produced broader keywords, while the specific prompt produced more useful long-tail keywords.

3. Group music streaming app keywords into 3 topic clusters based on user intent.

Question:

Take your keyword list for a music streaming app and use an AI tool such as ChatGPT or Gemini to group the keywords into 3 topic clusters based on user intent.

Answer:

Cluster 1: Free Music

Keyword

free music streaming

listen to music online free

free songs online

free music app

stream music without subscription

User Intent: Users want to listen to music without paying.

Cluster 2: Bollywood Music

Keyword

Bollywood songs online

latest Bollywood songs

Hindi songs streaming

new Hindi songs

Bollywood music playlist

User Intent: Users are specifically searching for Indian/Bollywood music.

Cluster 3: Playlist & Personalization

Keyword

create music playlist

personalized music playlist

best playlist app

make a playlist online

music playlist for workout

User Intent: Users want to create, discover, or personalize playlists.

4. Check the keyword difficulty of 5 Zomato-style restaurant search keywords.

Question:

Pick 5 keywords from your Zomato-style restaurant search keyword list and use a free online keyword difficulty checker such as Ahrefs, SEMrush, or Moz to assess their difficulty scores. List the scores and suggest which keyword is easiest to rank for.

Answer:

For this example, I used **SEMrush's Keyword Difficulty concept**, which scores keywords from **0–100**, with lower scores generally indicating easier organic ranking. SEMrush states that scores below 30 are typically more suitable for newer websites. ([Semrush](#))

Note: Keyword difficulty changes by country, database, and time. The figures below are **sample/assignment values**, not a claim that these are today's exact Ahmedabad scores. For a live submission, enter the keywords into the checker and replace the values with the current results.

No.	Keyword	Example KD Score	Difficulty
1	best restaurants in Ahmedabad	62	Difficult
2	restaurants near me	78	Very Hard
3	cheap restaurants in Ahmedabad	45	Possible
4	best pizza restaurants in Ahmedabad	39	Possible
5	affordable restaurants near Ahmedabad colleges	22	Easy

Easiest keyword to rank for:

“**affordable restaurants near Ahmedabad colleges**” would be the easiest of these five because its longer and more specific search phrase targets a narrower audience.

SEMrush explains that longer, more specific keywords often have lower difficulty and recommends considering lower-KD keywords for newer websites. ([Semrush](#))

You can use [SEMrush Free Keyword Difficulty Checker](#) to verify the current scores.

5. Create a topic cluster for a new IPL fan app.

Question:

Imagine you are building a topic cluster for a new IPL fan app. List a main topic and at least 4 subtopics (clusters) with 3 keywords each, using AI to help you brainstorm the clusters.

Constraint: Do not repeat any keyword in more than one cluster.

Answer:

Main Topic: IPL Fan App – Complete IPL Experience

Cluster 1: IPL Live Scores

Keyword

IPL live score

IPL ball by ball score

IPL match score
today

Intent: Users want real-time match information.

Cluster 2: IPL Teams

Keyword

IPL team list

IPL team squad

IPL team players

Intent: Users want information about IPL teams and players.

Cluster 3: IPL Schedule

Keyword

IPL match schedule

IPL upcoming
matches

IPL match dates

Intent: Users want to know when upcoming matches will happen.

Cluster 4: IPL Statistics

Keyword

IPL highest run scorer

IPL highest wicket taker

IPL player statistics

Intent: Users want historical and current player statistics.

Final Topic-Cluster Structure

Main Topic: IPL Fan App

→ **Cluster 1:** IPL Live Scores

→ **Cluster 2:** IPL Teams

→ **Cluster 3:** IPL Schedule

→ **Cluster 4:** IPL Statistics

There are **12 unique keywords**, and **no keyword is repeated across the clusters**, satisfying the given constraint.
